

Funds Costs and Charges Summary

March 2023

Contents

Explanatory Notes	01
Funds Costs and Charges Summary	03

As a firm, we understand the need for greater transparency of costs and charges as one of the means to allow investors to undertake a value assessment, which consequently will drive competitive pressure leading to increased efficiency and improved competitiveness of the market. We recognise that with various disclosure obligations on cost transparency (both under UK and European regulations), it is important for investors to have a full visibility of costs and charges within the product that they have chosen to invest in. This disclosure has been prepared in line with the Investment Association's (IA) Member Guidance on Disclosure of Fund Charges and Costs. Investors should take caution in comparing costs and charges information between product providers as some elements of costs and charges (e.g. implicit costs) can be calculated differently.

Explanatory Notes

This report is applicable to our range of UK Open Ended Investment

Companies (UK OEICs), UK Non UCITS Retail Schemes (NURS), Irish Undertakings for Collective Investment in Transferable Securities (Irish UCITS) and Investment Trusts.

(A) Entry charge

When you enter certain share classes of a fund an entry charge may be imposed. This is the maximum charge that might be taken out of your money before it is invested.

These charges are not applicable to our range of UK OEIC funds or Investment Trusts but a preliminary charge of up to 5 per cent of the Net Asset Value per share may be payable on any investment into class A shares of our Irish UCITS unless the charge is waived or reduced by the Investment Manager at its discretion.

If you buy our Investment Trusts on the secondary market a Stamp Duty Reserve Tax (SDRT) of 0.5% is payable.

Exit charge

This is the maximum that might be deducted from the proceeds of selling your investment before they are paid to you. Exit Costs are not charged across our range of UK OEICs, Irish UCITS or Investment Trusts.

Charges taken from the fund over a year:

Ongoing charges cover the recurring day to day costs of running a fund. These comprise of, but are not limited to, management fees, other ongoing costs, gearing costs (Investment Trusts only), and indirect costs.

(B) Management fees

These are the standard annual investment management fees for our range of UK OEICs, Irish UCITS and Investment Trusts. The fee reported here reflects the current charge (ex-ante), not the historical average (ex-post).

Performance fees

Performance fees are not charged across our range of UK OEICs, Irish UCITS or Investment Trusts.

(C) Other ongoing costs

These include, but are not limited to, depositary fees, custody safe keeping fees and professional fees (e.g. audit fees, legal fees).

(D) Indirect costs included in the OCF

If the fund you hold invests in other Investment fund products a proportion of the ongoing expenses that these funds charge is included in the total ongoing costs calculated for your fund.

(E) Ongoing charges figure (OCF) (B+C+D)

The ongoing charges are referred to as the Ongoing Charges Figure (OCF) under the Investment Association (IA) and Committee of European Securities Regulators (CESR) guidelines. These guidelines apply to the OCF calculated and disclosed in the Key Investor Information Document (KIID) for our UK OEICs and Irish UCITS (an EU Key Information Document – KID, is also produced for our Irish UCITS Funds). The OCF disclosed for the Investment Trusts follows the Association of Investment Companies (AIC) guidelines which excludes gearing costs. Gearing costs have been included in the report for full transparency as they are required to be separately disclosed in the Key Information Document (KID) required under the Packaged Retail and Insurance-based Investment Products (PRIIPs) regulation. The OCF is calculated as the ratio of the total ongoing charges to the average net asset value of the fund and is reported as a percentage.

(F) Gearing costs (Investment Trusts only)

The Investment Trusts managed by Baillie Gifford are allowed to borrow money for investment purposes, commonly referred to as ‘gearing’ or ‘leverage’. The gearing cost is the associated cost of borrowing money to invest, including interest and arrangement fees.

Explicit transaction costs – (G) Broker commissions and (H) Transfer taxes

These costs are incurred when trading in the financial markets. Buying or selling holdings may result from: individual stock considerations, portfolio changes due to broader implementation of Baillie Gifford’s investment policy and from client cash inflows and outflows into/from the fund.

(I) Implicit transaction costs

We calculate implicit transaction costs using the PRIIPs arrival price methodology (also known as the ‘slippage’ methodology) which combines the following cost components: market spread, market impact, market movements.

Market impact is an estimate of the cost that occurs due to the market price moving against the buyer or seller in response to their transactions, this can be more apparent when large volumes (as a percentage of the entire volume in issue) are transacted or liquidity for the financial instrument traded is limited. In effect it is the market price of the financial instrument being traded reacting to a change in supply and demand (by impacting market liquidity) which in turn can push the market price up for buyers and down for sellers. Market impact is considered a transaction cost.

The implicit cost calculation also includes market movements unrelated to the individual trade that cause the market price of the instrument traded to fluctuate for reasons other than the actions of the buyer/seller e.g. stock specific events such as a profit warning issued to the market between the transaction being communicated to the market and the transaction being executed in the market. The methodology assumes that these are random events and will average out to an immaterial cost over time (subject to sufficient turnover of fund holdings). The implicit cost of a transaction is measured as the difference between the average execution price when the order to buy or sell has been completed and the arrival price (the mid-market price at the time the instruction was communicated to the market) the result is then multiplied by the number of units bought or sold and reported as a

percentage of the average fund value. The transaction costs are calculated on an annualised basis, based on the average transaction cost incurred by the fund over the previous three years. Where a fund has been operating for less than three years and does not have a full three years of transaction costs history an estimate is used as per the ‘new PRIIPs’ methodology to fill the gap in the transaction history.

(J) Indirect transaction costs

Where a fund invests in other investment funds, the fund’s share of the reported average transaction costs of those other funds is included as indirect transaction costs in the fund’s total transaction costs.

(K) Anti-dilution offset available

We use a swinging single pricing methodology for our pooled funds (UK OEICs and Irish UCITS) and reserve the right to adjust a fund’s price to protect your investment from the costs of buying and selling investments that result from other investors joining or leaving a fund. An estimate of the transaction costs that may be incurred by a fund in response to other investors’ dealing activity is passed onto the incoming/outgoing investor through the swinging single pricing mechanism by means of an anti-dilution adjustment. The amount of any such adjustment is calculated by reference to the estimated costs of dealing in the underlying investments, including any dealing spreads, broker commissions, transfer taxes and stamp duty. Under the European PRIIP’s regulations it is permissible to offset the transaction costs of a fund with the proceeds collected from the application of the anti-dilution adjustment described above.

Following revisions to the EU PRIIPs and UK PRIIPs regulations (post-Brexit), that applied from January 1st 2023, a transaction cost ‘floor’ has been created. Under the UK PRIIPs transaction cost floor the application of dilution offset is limited to the extent that it does not cause the total transaction cost to fall below zero i.e. negative transaction costs cannot arise because of dilution offset. This does not completely rule out the possibility of negative transaction costs, however, it will eliminate those instances where dilution offset was the cause. The EU transaction cost floor simply limits the level of transaction costs that can be reported to a minimum of total explicit transaction costs (see ‘Explicit transaction costs’ above). This means that even where negative transaction costs exist prior to the application of dilution offset the transaction costs reported under the EU floor will always be a positive total equal to a minimum of explicit transaction costs.

(L) Anti-dilution offset applied (UK Floor)

This is the amount of available dilution offset (see K above) that has actually been utilised under the UK transaction cost floor rule.

(M) Total transaction costs UK floor (G+H+I+J-L)

This is the total transaction costs per the UK PRIIPs transaction cost floor rule (see ‘K’ above).

(N) Total transaction costs EU Floor (G+H+I+J-K) or (G+H)

This is the total transaction cost per the EU transaction cost floor (see ‘K’ above).

(O) Total Costs UK PRIIPs (E+F+M)

This is the sum of ongoing charges (and gearing in the case of the Investment Trusts) and UK transaction costs.

(P) Total Costs EU PRIIPs (E+F+N)

This is the sum of ongoing charges (and gearing in the case of the Investment Trusts) and EU transaction costs.

Total Costs (UK/EU) represent what could be referred to as the ‘total fund cost’ however it is generally the case that the ongoing costs are viewed separately from transaction costs and both are reported separately in the PRIIPs EPT and the MiFID II European MiFID Template (EMT). Transaction costs can fluctuate significantly as they are directly linked to trading activity because of investment decisions, client inflows/outflows and market conditions, whereas ongoing costs are not, and tend to be of a more constant nature within the direct control of the asset manager.
