

Fund objective

To achieve (after deduction of costs):

- an annualised return over rolling five-year periods that is at least 3.5% more than UK Base Rate
- a positive return over rolling three-year periods
- annualised volatility of returns over rolling five-year periods that is below 10%

There is no guarantee that a positive return will be achieved over rolling three-year periods, or any time period, and capital may be at risk.

The manager believes these are appropriate targets given the investment policy of the Fund and the approach taken by the manager when investing.

There is no guarantee that these objectives will be achieved over any time period and actual results may differ from these objectives, particularly over shorter time periods.

Investment proposition

The Fund is actively managed. When constructing the portfolio, we consider the associated returns and risks prospects for each asset class; consequently, asset allocation does vary over time depending on where we see the best opportunities. The Fund can invest in a wide range of different asset classes including, but not limited to, listed equities; developed market government and corporate bonds; emerging market debt; property; commodities; infrastructure and absolute return funds.

Key terms

Periodic performance is a method of evaluating how a fund is doing over time. It compares a fund's performance in each period to its performance in past periods. It also looks at the performance of the fund to the performance of an index or its peers.

Discrete performance is a method of evaluating the degree to which a fund performs compared against its benchmark on a given date.

Historic yield is based on distributions paid by the Fund in the previous 12 months as a percentage of the mid-market share price, as at the date shown. Investors may be subject to tax on their distributions, however, we are unable to give tax advice. Where we believe the historic yield to be materially unrepresentative, forecast yields have been quoted based on estimated income and expenses.

IA sectors are provided by the Investment Association. These sectors break up the universe of available funds to help investors navigate the large number of available products.

Additional fund information

The ongoing charge figure may vary from year to year and will exclude the costs of buying and selling assets for the Fund (unless these assets are shares of another fund). The Ongoing Charge Figure (OCF) is at the latest annual or interim period. The OCF may be lower than previous declarations as a result of a revision to how the indirect fees associated with closed-ended investment companies need to be shown. This does not necessarily mean that fund expenses have gone down rather that we have reverted to how they have been calculated until 30 June 2022 to reflect the revised Investment Association's Guidance on Disclosure of Fund Charges and Costs (July 2020, updated January 2022, revised November 2023). Further explanation of all the charges and costs relating to this Fund can be found in the Enhanced Disclosure of Fund Charges and Costs document, which is available through our website, bailliegifford.com. Where the share class has been launched during the financial period and / or expenses during the period are not representative, an estimate of expenses may have been used instead. Baillie Gifford operates a single swinging price for the Fund and, therefore, may apply a dilution adjustment to the price to protect long-term investors from the costs associated with buying and selling underlying investments that result from other investors joining or leaving the Fund. This adjustment will affect relative performance, either positively or negatively. Exchange traded futures are used either to gain exposure to asset classes or to hedge existing investments against adverse market movements. When calculating the portfolio asset class weightings, all future positions are included at 0% weight. Where shown, active currency exposure reflects the net unrealised profit or loss of open positions in the Fund. This may show as a negative figure.

All figures are rounded, so any totalling may not sum.

Target market

This Fund is suitable for all investors seeking a Fund that aims to deliver capital growth over a long-term investment horizon. The investor should be prepared to bear losses. This Fund is compatible for mass market distribution. This Fund may not be suitable for investors who are concerned about short-term volatility and performance, seeking a regular source of income and investing for less than five years. This Fund does not offer capital protection.

Risk warnings

The Fund does not guarantee positive returns. It aims to limit the extent of loss in any short term period to a lower level than equities. Investment markets can go down as well as up and market conditions can change rapidly. The value of an investment in the Fund, and any income from it, can fall as well as rise and investors may not get back the amount invested. The specific risks associated with the Fund include:

- Market values for illiquid securities which are difficult to trade, or value less frequently than the Fund, such as holdings in weekly or monthly dealt funds, may not be readily available. There can be no assurance that any value assigned to them will reflect the price the Fund might receive upon their sale. In certain circumstances it can be difficult to buy or sell the Fund's holdings and even small purchases or sales can cause their prices to move significantly, affecting the value of the Fund and the price of shares in the Fund.
- Custody of assets, particularly in emerging markets, involves a risk of loss if a custodian becomes insolvent or breaches duties of care.
- The Fund invests in emerging markets, which includes China, where difficulties with market volatility, political and economic instability including the risk of market shutdown, trading, liquidity, settlement, corporate governance, regulation, legislation and taxation could arise, resulting in a negative impact on the value of your investment.
- Bonds issued by companies and governments may be adversely affected by changes in interest rates, expectations of inflation and a decline in the creditworthiness of the bond issuer. The issuers of bonds in which the Fund invests, particularly in emerging markets, may not be able to pay the bond income as promised or could fail to repay the capital amount.

- Investments may be made directly in hedge funds and insurance-linked bonds or, through specific investment vehicles into property, infrastructure, private (unlisted) companies and commodities. Returns from these investments are sensitive to various factors which may include interest and exchange rates, economic growth prospects and inflation, the occurrence of natural disasters, and the cost and availability of gearing (debt finance).
- The Fund has exposure to foreign currencies and changes in the rates of exchange will cause the value of any investment, and income from it, to fall as well as rise and you may not get back the amount invested.
- Derivatives may be used to obtain, increase or reduce exposure to assets and may result in the Fund being leveraged. This may result in greater movements (down or up) in the price of shares in the Fund. It is not our intention that the use of derivatives will significantly alter the overall risk profile of the Fund.

Further details of the risks associated with investing in the Fund can be found in the NURS-Key Investor Information Document or the Prospectus, copies of which are available at bailliegifford.com.
