Verklaring inzake de belangrijkste ongunstige effecten van beleggingsbeslissingen op duurzaamheidsfactoren

Financiëlemarktdeelnemer: Baillie Gifford Investment Management (Europe) Ltd (213800UMCR6T2PTQSG68)

Samenvatting

Baillie Gifford Investment Management (Europe) (213800UMCR6T2PTQSG68) neemt de belangrijkste ongunstige effecten van zijn beleggingsbeslissingen op duurzaamheidsfactoren in aanmerking. Deze verklaring is de geconsolideerde verklaring inzake de belangrijkste ongunstige effecten op duurzaamheidsfactoren van Baillie Gifford Investment Management (Europe) Ltd.

Deze verklaring inzake de belangrijkste ongunstige effecten op duurzaamheidsfactoren heeft betrekking op de referentieperiode van 1 januari 2024 tot 31 december 2024.

Baillie Gifford Investment Management (Europe) heeft het portefeuillebeheer gedelegeerd aan Baillie Gifford & Co en Baillie Gifford Overseas Limited en heeft Baillie Gifford's Stewardship Principles and Guidelines aangenomen om zijn aanpak te bepalen ten aanzien van de overweging van de materiële of mogelijk materiële ESG-factoren, waaronder belangrijkste ongunstige effecten, een duurzaamheidsrisico. Wij zijn van mening dat financiële prestaties en een passend beheer van ESG-factoren op lange termijn vaak onderling zijn verbonden. Om inzicht te krijgen in mogelijke beleggingsrendementen is het daarom belangrijk om te overwegen welk ongunstig effect een bedrijf kan hebben op het milieu of de maatschappij. Op bedrijfsbreed niveau hebben we geen doelen gesteld die verband houden met de indicatoren voor belangrijkste ongunstige effecten, behalve met betrekking tot controversiële wapens. We verplichten ons tot het uitsluitien van controversiële wapens in overeenstemming met het uitsluitingsbeleid zoals beschreven in onze Beginselen en richtlijnen inzake rentmeesterschap. Elke beleggingsstrategie kan een andere aanpak hanteren bij de overweging van de belangrijkste ongunstige effecten. Een subgroep van onze beleggingsfondsen identificeert en mitigeert de belangrijkste ongunstige effecten op kwalitatieve wijze door specifieke uitsluitingen toe te passen die gekoppeld zijn aan specifieke inkomstenstromen van ondernemingen. Details over specifieke fondsuitsluitingen zijn te vinden in de relevante fondsdocumentatie. We hebben deze aanvullende indicatoren geïdentificeerd: i) beleggingen in ondernemingen zonder initiatieven voor koolstofemissiereductie gericht op de afstemming met de Overeenkomst van Parijs en ii) aantal geconstateerde gevallen van ernstige mensenrechtenproblemen en schendingen. Deze aanvullende indicatoren zijn gekozen omdat ze aansluiten bij kwesties die als materieel worden beschouwd voor het groeipotentieel van beleggingen op lange termijn.

Betrokkenheid bij de activa die wij namens onze klanten aanhouden, is essentieel voor onze rol als effectieve rentmeesters van het kapitaal van onze klanten en vormt een uitbreiding van ons onderzoeksproces. Onze Beginselen en richtlijnen inzake rentmeesterschap fungeren als ons betrokkenheidsbeleid. We maken gebruik van het VN Global Compact om mogelijke problemen te identificeren bij onze ondernemingen waarin is belegd. We toetsen onze deelnemingen ook aan gerelateerde normen, waaronder de richtsnoeren voor multinationale ondernemingen van de Organisatie voor Economische Samenwerking en Ontwikkeling en de leidende beginselen van de VN inzake bedrijfsleven en mensenrechten. Onze Verklaring inzake klimaatgerelateerde intentie en ambitie beschrijft onze overtuiging dat een succesvolle overgang die de wereldwijde temperatuurstijging beperkt en de impact op gemeenschappen wereldwijd beheert, onze klanten betere kansen biedt op beleggingsrendementen. Maar we erkennen dat de succesvolle weg naar dit doel niet vooraf is bepaald en zich zal blijven ontwikkelen. Meer informatie over onze inspanningen om de resultaten te onderzoeken die voor ons liggen, vindt u in ons op TCFD afgestemde Klimaatrapport.

De beoordeling van ongunstige effecten wordt gebaseerd op gegevens van derden en ons eigen onderzoek. De gegevens van derden die worden gebruikt om ongunstige effecten te kwantificeren aan de hand van verschillende indicatoren, zijn gebaseerd op een retrospectieve analyse of op schattingen (bijv. gebruik van proxygegevens en/of aannames). De kwaliteit en betrouwbaarheid van deze indicatoren zijn dan ook afhankelijk van bedrijven die deze informatie openbaar maken en van gegevensaanbieders die de beschikbare informatie tijdig bijwerken. De beschikbaarheid van gegevens verschilt niet alleen per activaklasse (bijv. aandelen versus bedrijfsschulden), maar ook per markt (bijv. ontwikkelde markt versus opkomende markt). Hoewel we verwachten dat de beschikbaarheid van gegevens op korte tot middellange termijn voor bepaalde activaklassen/markten (bedrijfsschulden, particuliere aandelen en opkomende markten) zal toenemen door verschillende initiatieven die de openbaarmaking van duurzaamheidsgerelateerde informatie zouden harmoniseren, verwachten we voor bepaalde activaklassen (bijv. valuta's, derivaten) dat het langer zal duren om deze af te handelen. Waarden voor ongunstige duurzaamheidsindicatoren kunnen worden beïnvloed door de beschikbaarheid van gegevens en moeten worden bekeken in samenhang met 'Bijlage 1 - Gegevensdekking'. De parameters die in dit verslag worden vermeld, zijn berekend volgens de methode die is uiteengezet in de Regulatory Technical Standards onder de Sustainable Finance Disclosure Regulation van de EU. Daarom kunnen de parameters verschillen van andere openbaarmakingen van Baillie Gifford waar een andere methode is gebruikt. Aan de achterzijde staat een samenvattende tabel met de Belangrijkste Ongunstige Effecten, met alle details in dit verslag.

Wanneer er geen effect wordt vermeld, is dit omdat een bepaalde indicator niet relevant is op basis van beleggingen in de financiële producten van de entiteit. Meer informatie is beschikbaar in het gedeelte Gegevensdekking. Door afronding is het mogelijk dat de opgetelde waarden niet precies gelijk zijn aan de componenten.

Indicatoren voor ondernemingen waarin is belegd

Klimaat- en andere milieu-indicatoren

Indicator ongunstige effecter	n op duurzaamheid	Effect
		2024
Broeikasgasemissies	1. BKG-emissies (Scope 1.2 & materiële Scope 3 emissies tCO ₂ e)	1.934.102,6
	2. Koolstofvoetafdruk (Scope 1.2 & materiële Scope 3 emissies tCO₂e per €M aan beleggingen)	120,1

							and potential transition role. The

Adverse sustainability indicator	Metric	Impact (2024)	Impact (2023)	Impact (2022)	Explanation	Actions taken, and actions planned and targets set for the next reference period
					From June 2023 onwards we moved to PCAF Phase 2 sectors for Scope 3 Material. This meant that a wider range of sectors were included in Scope 3 Material during 2023, compared to the previous year, explaining the increase seen in this metric during that year. We saw a reduction in emissions between 2023 and 2024 partly due to a reduction in asset under management (AUM) over the period and also due to a reduction in exposure to the highest emitting assets.	were made to the assessment criteria and categorisation. Our ESG Assurance Group monitors a number of sustainability risk indicators across our investment strategies. Whilst these

Adverse sustainability indicator	Metric	Impact (2024)	Impact (2023)	Impact (2022)	Explanation	Actions taken, and actions planned and targets set for the next reference period	
						While the results of the work cannot be distilled to simple numbers or data points, each team aims to become better equipped to invest through the transition and be better able to explain the climate-related sensitivities of the portfolios they manage to their clients. During the reference period, we engaged with 114 companies on climate change. Further details of our approach to climate change can be found in our TCFD report, available on our website.	
2. Carbo footprint		120.1	161.0		Scope 1, 2 & material Scope 3 emissions tCO2e per €M invested. The carbon footprint (or 'financed emissions') represents the aggregated GHG emissions per million € invested and can be used for comparisons of carbon intensity. From June 2023 onwards we moved to PCAF Phase 2 sectors for Scope 3 Material. This meant that a wider range of sectors were included in Scope 3 Material during 2023, compared to the previous year, explaining the increase seen in this metric during that year. A reduction in exposure to the highest emitting assets was a driver for the reduction in carbon footprint between 2023 and 2024.	See Climate change and the energy transition description.	

Adverse sustainability indicator	Metric	Impact (2024)	Impact (2023)	Impact (2022)	Explanation	Actions taken, and actions planned and targets set for the next reference period
3. GHG intensity of investee companies	GHG intensity of investee companies (tCO₂e per €M revenue)	338.9	360.6		Scope 1, 2 & material Scope 3 emissions tCO2e per €M revenue. The aggregated carbon intensities of the companies (per €M revenue), scaled by size of holding. The GHG intensity metric can therefore be used to help measure overall exposure to high carbon intensity holdings. From June 2023 onwards we moved to PCAF Phase 2 sectors for Scope 3 Material. This meant that a wider range of sectors were included in Scope 3 Material during 2023, compared to the previous year, explaining the increase seen in this metric during that year.	See Climate change and the energy transition description.
4. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AUM)	2.1	3.7		Measures the percentage of total AUM exposed to companies classified as having exposure to fossil fuel related activities in the MSCI universe. This differs from the revenue-based fossil fuel exposure metrics we also report because it only identifies companies with a fossil fuel sector classification.	See Climate change and the energy transition description. Additionally, we offer a number of funds which make a binding commitment to limit investment in fossil fuels. Details can be found in relevant fund documentation.
5. Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	72.8	71.3	80.8	'Renewable energy sources' means renewable non-fossil sources, namely wind, solar (solar thermal and solar photovoltaic) and geothermal energy, ambient energy, tide, wave and other ocean energy, hydropower, biomass, landfill gas, sewage treatment plant gas, and biogas. 'Non-renewable energy sources' means energy sources other than those referred to above.	See Climate change and the energy transition description.
6. Energy consumption intensity per	Energy consumption in GWh per million EUR of revenue of investee	0.4	0.8		'Energy consumption intensity' means the ratio of energy consumption per unit of activity,	See Climate change and the energy transition description.

Adverse sustainability indicator		Metric	Impact (2024)		Impact (2022)	Explanation	Actions taken, and actions planned and targets set for the next reference period	
	high impact climate sector	companies, per high impact climate sector (GWh per €M revenue)				output or any other metric of the investee company to the total energy consumption of that investee company. 'High impact climate sector' refers to NACE sectors A to Holus sector L.		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas (% of AUM)	2.8	0.4	0.0	Exposure is measured by combining controversy indicators related to a firm's use or management of natural resources, with where the company operates sites in, or adjacent to, areas of high biodiversity value and protected areas. Improvements in the methodology of our data provider has led to an increase in this data point.	Nature and Biodiversity Nature and biodiversity-related risks and opportunities are an increasing focus for us and many of our clients. Our firmwide Climate Assessment process integrates physical climate, water and deforestation risks. Additionally, we complete annual audits of key nature-related themes. We will continue evolving these approaches as industry guidance and data improve. In 2024, we undertook a deforestation review on our high-priority names selected from across portfolio holdings. This has expanded our understanding of minimum standards and best practices for companies exposed to deforestation-related risks. During the reference period, we engaged 40 companies on their natural resource use and impact.	
Water	8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (tonnes per €M invested)	0.001	0.023	88.305	Exposure is measured using emissions to water data as reported in the MSCI universe. This metric details emissions to water reported by companies, pertaining to actual pollutants or effluents. In line with peers we continue to see low coverage in the reporting of this metric by held companies, which remains an industry-wide issue. As	See Nature and Biodiversity description.	

Adverse sustainability indicator		Metric	Impact (2024)	Impact (2023)	Impact (2022)	Explanation	Actions taken, and actions planned and targets set for the next reference period
						part of our data strategy we continue to assess ways to improve coverage of this metric. Between years 2022 and 2023, the primary driver of the decline is a reduction of data coverage from 6.4% in 2022 to 0.9% in 2023. For some assets continually held across	
				1.0		the three reporting periods, data was not available for the where this was previously available.	
Waste	9. Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (tonnes per €M invested)	0.6	1.2		'Hazardous waste' means hazardous waste as defined in Article 3(2) of Directive 2008/98/EC of the European Parliament and of the Council', 'Radioactive waste' means radioactive waste as defined in Article 3(7) of Council Directive 2011/70/Euratom'	See Nature and Biodiversity description.

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS

Adverse sust indicator	ainability	Metric	Impact (2024)	Impact (2023)	Impact (2022)	Explanation	Actions taken, and actions planned and targets set for the next reference period
Social and employee matters	10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AUM)	0.2	5.4	5.5	We updated our report for 2024, to reference only companies classed as non-compliant with the UNGC by MSCI. Previous reporting years have included companies classified both as watchlist and non-compliant. This has resulted in a reduction in this data point. We believe the new approach to be more closely aligned with the PAI requirements.	UNGC and related standards The principles and standards set out in the UNGC are an appropriate framework for considering a business' long-term sustainability, covering the areas of human rights, labour, environment and anti-corruption. A company's failure to meet the UNGC may result in a material risk to the long-term performance of the business. Our ESG Assurance Group monitors a number of sustainability risk indicators across our investment strategies. Whilst these indicators are not binding on strategies, they seek to prompt further discussion or research into the consideration of certain sustainability risks, with any concerns escalated to the Equity or Multi Asset and Income Investment Risk Committee as relevant. These indicators include exposure to UNGC non-compliant companies against the relevant benchmarks. We have several funds that make a binding commitment not to invest in companies that are non-compliant with the UNGC. Details can be found in relevant fund documentation. During the reference period, we engaged with 6 companies regarding potential violations of the UNGC and related standards.

processes and compliance mechanisms to monitor compliance with UN Global		16.9	67.0	70.6 Improvements in the methodology of our data provider has led to an improvement in this data point.	See United Nations Global Compact (UNGC) and related standards description.
principles and OECD Guidelines for Multinational Enterprises	Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AUM)				
gender pay	Average unadjusted gender pay gap of investee companies (ratio)	14.0	12.1	means the difference between average gross hourly earnings of male paid employees and	Diversity and inclusion We expect businesses to manage their organisation's culture to ensure all employees are treated fairly (including in relation to pay) and respectfully in the workplace. Suitable policies and procedures should be in place to ensure that inappropriate behaviour and discrimination are identified and addressed accordingly. During the reference period, we supported shareholder resolutions on gender pay gap reporting at 5 companies.

13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members (% of board members who are female)	29.9	28.2	'Board' means the administrative, management or supervisory body of a company.	We believe that board diversity is an important issue for all businesses, potentially impacting a company's ability to generate returns over the long term. We consider diversity broadly to include gender and ethnic diversity, diversity of thought, background, skillset, time horizon and risk appetite. We therefore expect our holdings to take steps to understand and, where necessary, improve board-level diversity.
					During the reference period, we engaged with 7 companies specifically on board diversity and a further 8 on diversity more broadly.

laa e	0	2.21		 100	[O I
to controversial	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AUM)	0.0	0.0	'Controversial weapons' means anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Controversial Weapons Baillie Gifford seeks to avoid investment in holdings directly involved in producing controversial weapons, or the components or services that are essential to and tailor-made for them. This policy applies specifically to the following types of weapons:
					 Anti-personnel mines Biological and chemical weapons Cluster munitions Depleted uranium weapons White phosphorus incendiary weapons Nuclear weapons (where such weapons are likely to be in breach of the objectives of the Treaty on the Non-Proliferation of Nuclear Weapons).
					This firmwide exclusion applies only to companies held directly within portfolios we manage on behalf of our clients. Exposure obtained indirectly (e.g. through an investment fund not managed by Baillie Gifford) will not automatically take account of this exclusion. We use external research providers to help us identify excluded companies and, where appropriate, supplement this with our research to determine our position on individual companies.

Indicators applicable to investments in sovereigns and supranationals

Adverse susta	inability	Metric	Impact (2024)	Impact (2023)	Impact (2022)	Explanation	Actions taken, and actions planned and targets set for the next
			, ,	, ,			reference period
Environmental		GHG intensity of investee countries	212.6	232.6		institutions shall use the	When actively investing in sovereign bonds, Baillie Gifford considers GHG intensity data alongside commitments the country has made in line with the Paris Agreement. Dependent on specific investment strategy commitments, consideration of whether the country is on course to achieve Paris Agreement targets may form part of our investment analysis and may inform decisions. We use our position as capital providers to engage on selected issues directly and through industry bodies. This consideration does not apply when investing in sovereign debt for hedging or cash management purposes.
Social	countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute: 9 Relative: 13.9%	Absolute: 12 Relative: 15.5%	Relative: 11.3%	of Law' metric. This captures perceptions of the extent to which agents have confidence in and abide by the rules of society, in particular the quality of contract enforcement, property rights, the police, and the courts, as well as the likelihood of crime and violence. The first figure is the number of unique investee countries whose metric is less than -0.4, the threshold corresponding	When investing in sovereign bonds, Baillie Gifford believes that if a country is governed effectively, its people are respected and its natural assets are managed responsibly, there is a greater chance it will enjoy sustainable growth and development, and be in a better position to repay bond debt. Dependent on specific investment strategy commitments, these factors are integrated into our analytical framework, which rests on three key areas: macroeconomic sustainability, economic management and growth potential. We use our position as capital providers to engage on selected issues directly and through industry bodies. This consideration does not apply when investing in sovereign debt for hedging or cash management purposes.

Indicators applicable to investments in real estate assets

	identified cases of severe human rights	Number of cases of severe human rights issues and incidents connected to investee companies on a weighted average basis (average number in last three years)	0.04	0.02	0.01	N/A	In addition to harming individuals, violating labour and human rights can damage the reputation and value of our holdings. Consequently, we expect our holdings to respect internationally accepted human and labour rights in line with the United Nations Guiding Principles for Business and Human Rights. At a minimum, this should include: - Maintaining health and safety systems, particularly in high-risk sectors; - Managing exposure to labour and human rights risks, especially modern slavery and; - Encouraging positive relationships with local communities. - We have specific monitoring processes in place specifically regarding modern slavery and have conducted additional due diligence on holdings where modern slavery incidents have been highlighted. During the reference period, we engaged with 23 companies on human and labour rights.

Description of policies to identify and prioritise principal adverse impacts on sustainability factors

Baillie Gifford Investment Management (Europe) has delegated portfolio management to Baillie Gifford & Co and Baillie Gifford Overseas Limited and has adopted Baillie Gifford's Stewardship Principles and Guidelines to set its approach on the consideration of material or potentially material ESG factors, including principal adverse impacts, and sustainability risks. This policy is reviewed on an annual basis and was last updated in January 2025.

Identifying principal adverse impacts

We believe that, over the long run, financial performance and appropriate management of ESG factors are often intertwined. For example, companies that act as sustainable operators are less likely to face regulatory action, which could harm financial returns. Therefore, to understand potential investment returns it is important to consider what adverse impact a company may have on the environment or society and the likelihood of this impact to be internalised. We consider a number of potential adverse impacts in the context of our overall focus on long-term investment performance and company impact.

As an active manager, we conduct deliberate and thoughtful ESG research. Our ESG research is materiality-led. Each holding is different, but most of our efforts will focus on the one or two critical issues with significant relevance to the investment case. Investment cases for a given holding can differ between strategies.. Our ESG research considers both the risks of value-destruction and how the ESG characteristics and impacts of a holding might contribute to its growth if our investment case proves to be correct. We also seek to identify how a changing physical environment, shifting policy or emerging social expectations will likely impact our holdings' performance (positively and negatively) over our investment horizon. The holding-specific factors that we consider are broadly encapsulated within our Stewardship Principles. Should our research suggest concerns about a holding's practices or opportunities for improvement, we will engage and escalate, including using voting rights, where appropriate.

Our Stewardship Principles and Guidelines set out our expectations in relation to the assets in which we invest. This includes issues identified as principal adverse impacts under the Sustainable Finance Disclosure Regulation (SFDR):

- Governance arrangements;
- Human rights and labour rights;
- Principles of in the United Nations Global Compact (UNGC);
- Diversity and inclusion
- Climate change
- Nature and biodiversity
- Respect for legal and regulatory guidelines and consideration of stakeholder perspectives

We believe the principles and standards set out in the United Nations Global Compact (UNGC) are an appropriate framework for considering a business' long-term sustainability. A company's failure to meet the UNGC may result in a material risk to the long-term performance of the business.

Each investment strategy may take a different approach in the consideration of principal adverse impacts. Financially material ESG issues, including relevant potential adverse impacts of a holding, are routinely considered throughout the investment research process. ESG risk metrics, including a number of potential adverse impacts, are incorporated into investment risk reports periodically provided to investment managers. These metrics help investment managers identify emerging risks across the portfolio. A purely quantitative approach does not fully capture the underlying complexities faced by our holdings or provide a complete picture of risks and opportunities across portfolios. Still, it can indicate a need for deeper assessment. Therefore, we supplement metrics with bottom-up, qualitative information from our investment research and stewardship activities to provide a richer, more accurate picture.

A subset of our investment funds further identify and mitigate principal adverse impacts through the application of specific exclusions linked to specific business revenue streams which may include but are not limited to Thermal Coal; Other Fossil Fuels such as Oil and Gas; Military weapons systems, Tobacco and Alcohol. Other commitments may include compliance with Baillie Gifford's policy on assessing breaches of the United Nations Global Compact Principles for Business as outlined in Baillie

Gifford's Stewardship Principles and Guidelines document; commitments linked to the funds' carbon intensity or being managed in line with a net zero aligning mandate. Such commitments can lead to the identification and mitigation of a principal adverse impact. Details of specific fund exclusions can be found in the relevant fund documentation available on the Baillie Gifford website. However, most of our funds have no limitations to the sectors in which we can invest. Unless otherwise stated in fund documentation Baillie Gifford can invest in any companies we believe could create beneficial long-term returns for our clients which may include investments in companies which may ultimately have a negative impact on the environment and/or society. All Baillie Gifford investment funds are however subject to the exclusion of controversial weapons in line with the exclusion policy detailed in the Stewardship Principles and Guidelines document.

In identifying additional indicators for principal adverse impacts, financial market participants are encouraged to consider the scope, severity, probability of occurrence and potentially irremediable character on sustainability factors. As additional indicators, we have identified (i) investments in companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement and (ii) number of identified cases of severe human rights issues and incidents. These additional indicators were chosen as they are aligned with issues that are considered material to the long-term growth potential of investments.

Where an investment fund commits to investing in sustainable investments, such investments are subject to do no significant harm (DNSH) tests which means ensuring that the investments do no significant harm to any environmental or social objective. This includes assessing principal adverse impacts of investments either as part of the investment research process, through periodic portfolio reviews or through business activity restrictions. In reviewing principal adverse impacts, consideration will be given to how the impact affects the sustainability of an investment and if any further action needs to be taken to mitigate the impact such as engagement or voting action.

Governance

The ESG Oversight Group is responsible for setting the firm's strategic approach to ESG matters in relation to investment strategies and client activities and, along with the Head of ESG, for overseeing the ESG function. It provides coordination for the firm's approach to ESG and the multiple strands of ESG activity that take place. It aims to ensure that the rapidly evolving demands of ESG from an investment, client and regulatory perspective are met.

It is chaired by a Partner of Baillie Gifford and comprises senior representatives from the Investment Department, Clients Department and ESG Function. The ESG Oversight Group aims to:

- Coordinate and monitor progress towards the firm's ESG strategy, working with the individual investment, client and operational teams
- Empower and encourage investors to systemically consider ESG, as relevant for the investment strategy, throughout the investment process
- Create and oversee ESG-related research groups and ESG professionals to ensure Baillie Gifford has sufficient specialist knowledge
- Oversee the different components of the ESG function and ensure they continue to evolve to meet the requirements of investors, clients and regulators
- Ensure accurate ESG reporting to clients
- Oversee the ESG Assurance Group, ensuring that Baillie Gifford is equipped to meet its regulatory requirements and honour ESG commitments made by investment strategies
- Review and recommend any key ESG disclosures for approval or adoption by the Management Committee or any relevant Baillie Gifford entities. This includes the TCFD aligned Climate Report; Our Stewardship Approach Principles and Guidelines and the Investment Stewardship Activities Report.

This Group reports into the Management Committee, the Equity Leadership, Multi Asset and Income Leadership and Clients Management groups – which include partners from investment and client facing and operational areas. These reporting lines help ensure that our research and stewardship activities are aligned with and remain of value and relevance to our clients.

The ESG Oversight Group is also supported by the ESG Assurance Group. The ESG Assurance Group is responsible for ensuring that the firm is equipped to meet its ESG related regulatory requirements and that ESG commitments are being met. This Group is comprised of individuals from our ESG function, Clients Department, Business Risk, Compliance Department and Legal Department.

Data sources

We predominantly use MSCI as a source of raw ESG data for reporting purposes. This is due to the wide range of metrics available across different regulatory reports and MSCI's transparent methodology. We implement a data quality checking process that allows us to investigate any discrepancies and raise these with MSCI where necessary. We supplement data from MSCI with data from other providers such as Sustainalytics and Bloomberg where necessary, including as part of our investment research process. We recognise the need to develop a wider pool of data sources to allow for more robust reporting. To this end, we maintain relationships with various third party data providers to allow us to monitor enhancements to the ESG reporting metrics we require. Further details of our data sources are discussed in our Investment Stewardship Activities report.

Engagement policies

Engaging with the assets we hold on behalf of our clients is core to our role as effective stewards of our clients' capital and is an extension of our research process. Our Stewardship Principles and Guidelines acts as our engagement policy.

Why do we engage?

- 01. To fact-find: As investors, our responsibility does not begin and end with the investment decision. Before allocating our clients' capital, we must decide whether a particular investment meets our criteria and will continue to do so over our investment horizons. We may meet with a leadership team many times before we decide to take a position. After investing, our meetings with the company may involve asking for more information on topics or seeking to clarify certain points.
- 02. To assess: Once we have invested, we will continue to monitor our holdings to ensure we remain aligned. Where our holdings have committed to certain actions or if we have previously raised an issue with the company, we will engage to assess progress.
- 03. To influence: There will be instances when our reason for engaging is to seek change. We have high expectations of the investments we make on behalf of our clients. When they do not live up to these, or where we have identified a specific objective for change, our starting point (where possible) is to see if the leadership team is willing and able to address the issues we believe may impact the ability to deliver long-term returns for our clients. Sometimes, the influence we seek is to encourage a holding to be more ambitious in seizing new opportunities. Where strategies have specific sustainability commitments, engagement may be integral to meeting that commitment.

Over our investment time horizons, it may also be helpful (and even necessary) for us to communicate our support to the leadership of the investments we've made. We may encourage them to remain focused on the long term and occasionally offer the chance to learn from other investments that have faced similar challenges. Occasionally, this will include public support for a holding, eg through pre-declaring voting intentions.

Engaging to achieve a defined set of outcomes can be a time consuming and resource-intensive exercise. Even though we run relatively concentrated portfolios, we recognise the need to prioritise and, where appropriate, coordinate engagements across our investment teams. We are likely to do this when:

- We consider the issues to be particularly material to a holding's long-term investment performance and of a nature where more concerted engagement is required;
- We are a major shareholder or lender;
- We believe we can offer particular insight and guidance.

We believe that this approach maximises our chance of success. Portfolio managers working with the ESG analysts will select and prioritise engagement issues. We engage with companies for many reasons and the topics we prioritise will vary by individual issuer and investment strategy. Our proprietary investment research will inform this. Often, the larger a position we hold in an entity and the longer our holding history, the greater our ability to engage with a realistic ability to influence. However, we engage with issuers on key issues across a range of market capitalisations, geographies and holding sizes. Topics will include engagement related to principal adverse indicators, including but not limited to:

- Compliance with UNGC and related standards, including the OECD Guidelines for Multinational Enterprises;
- Climate change and the energy transition;
- Diversity and inclusion;
- Human rights and labour rights.

The issues we prioritise, the specific objectives and the likely escalation path will differ depending on the company and our detailed knowledge of the investment case. Once we have identified an issue of material relevance to the investment case, including principal adverse impacts, we will monitor progress and, if we fail to see meaningful improvement in what we believe is a material issue, we will escalate through various means. We may take voting action or suggest changes ranging from minor process improvements to a change in senior leadership. Ultimately, we will divest if improvements are not made in areas of material importance. A typical pathway for escalation may include some or all of the following:

- Engagement with management, Investor Relations or board members
- No progress voting action against appropriate AGM resolution
- Escalation to the Chair or Senior Independent Director
- Collaboration with other investors or relevant industry initiatives
- No progress and no reasonable prospect of progress -divest.

There are additional escalation options, such as filing or co-sponsoring shareholder proposals, attending AGMs, or articulating views publicly via different media outlets, which we may use if circumstances require.

Voting is an integral part of our responsibility to act as responsible stewards of our clients' capital. Our voting analysis and decisions are driven by what we consider will promote the company's long-term prospects and, therefore, support the long-term financial outcomes for our clients. In line with our investment philosophy, our voting analysis is bottom-up and led by the investment case. This means we assess every resolution on a case-by-case basis. Further details of Baillie Gifford's approach to engagement and voting is outlined in our Stewardship Principles and Guidelines document available in the About Us section of our website.

References to international standards

We utilise the UN Global Compact to identify potential concerns at our investee companies. We also consider our holdings against related standards including the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (indicator 10).

Our Statement of Climate-related Intent and Ambition outlines our belief that a successful transition that limits the global temperature increase and manages impacts on societies offers our clients a better opportunity for investment returns. But, we recognise that the pathway to achieving this is not predetermined and will continue to evolve. Further details about our efforts to explore the outcomes that could lie ahead are available in our TCFD-aligned Climate Report. Many of our clients have given us a mandate to invest and manage their portfolios to support the goal of achieving net zero greenhouse gas emissions by 2050, or sooner, in line with global efforts to limit warming to 1.5C ('net zero'). We take a thoughtful, bottom-up approach to the implementation of these mandates and will, in partnership with our clients, continue to evolve our approach to net zero, focusing on what is most likely to achieve real-world impact.

Baillie Gifford's strategy is consistent year-over-year and is centred on two main objectives: to act in the best interests of our clients and be responsible stewards of their capital through the investment decisions and engagements we undertake. Our climate change priority is to understand how climate-related risks and opportunities could impact on the achievement of these objectives.

Climate scenario analysis offers a way to help understand the society-wide complexities and uncertainties surrounding physical climate events, tipping points and the world's evolving energy and industrial systems. Considering different plausible versions of the future can educate, test assumptions and generate new investment ideas. At present, we believe qualitative approaches are more valuable than quantitative ones (which depend on numerical data and modelling) because they allow us to explore the complexities and knock-on effects of future scenarios in a level of detail that is a better fit with our longer-term growth-oriented investment approach.

In late 2022, we began working with two external organisations – the Deep Transitions project and Independent Economics – to help us further develop three climate scenario narratives that could be used by our investment teams and the wider firm to enrich our thinking on future climate-related risks and opportunities. The narratives explore additional detail and implications around the core pathways developed by the Network for Greening the Financial System (NGFS). Broadly, these are:

- An 'orderly' transition where global net zero emissions are reached around 2050, limiting global warming to less than 1.5C above pre-industrial averages by the end of this century.
- A 'disorderly' transition, which ultimately keeps average temperature rises to less than 2C by the end of this century.
- A 'hothouse' world scenario with at least 2.5C of warming above pre-industrial levels by the end of the century.

Further details of our plans and commitments in this area can be found in our TCFD-aligned Climate Report.

Historical comparison

Please see the above table for the historical comparison of the period reported on with the previous period(s) reported on.

Appendix 1 – Data Coverage

The following coverage statistics are for the current reporting period.

Baillie Gifford relies on a third party data provider (MSCI) for sufficient coverage, estimation and collation of accurate reporting by companies themselves. However we recognise that coverage of different metrics may vary and may in turn impact the data disclosed in this report. Therefore, we have included coverage figures for each metric that is used in this report in an effort to provide transparency of the data that is being used and how it impacts the overall reporting at portfolio level. We have also identified where we view the data coverage as Good, Medium or Poor and the actions we are taking to improve coverage and data quality (see below).

Coverage relative to Eligible Assets	Category	Explanation
>80%	Good	At present we view this as satisfactory coverage but expect coverage levels to continue to improve
20% - 80%	Medium	We review metrics in this group with an expectation that those at the higher end of the scale will continue to improve. For those at the lower end of the scale, we may seek to improve disclosure through corporate engagement but recognise different disclosure regimes exist globally and recognise the pace of improvement will vary across different jurisdictions.
<20%	Poor	We view this level of coverage as unsatisfactory but acknowledge that for these metrics, coverage is poor in general. As above, we may seek to engage with investee companies to encourage better disclosure.

The figure for Coverage below has been calculated based on percentage of total AUM. However the Category (Good, Medium or Poor) has been determined based on Coverage as a percentage of Eligible Assets. For example, if the figures for Coverage and Eligible Assets are the same, this means we have data for all the assets which are eligible to report that metric and therefore the Category will be considered Good.

Over the course of 2024, we continued to engage in work to improve our data processing capacity. This will allow us to take on additional third party sources of data to enhance the scope of our coverage. We do this while bearing in mind that methodologies differ between third parties and increased coverage may not always lead to higher quality data, but that the landscape continues to evolve and mature.

Climate and Other Environmental Related Indicators

Greenhouse Gas Emissions

GHG Emissions	Coverage	Eligible Assets	Category
Scope 1 GHG emissions (tCO₂e)	93.6	98.4	Good
Scope 2 GHG emissions (tCO ₂ e)	93.6	98.4	Good

Appendix 2 – Methodology/ Definitions

Climate and other environment-related indicators

Adverse sustainal	pility indicator	Methodology/ Definitions
Greenhouse gas emissions	1. GHG emissions (Scope 1,2 & material Scope 3 emissions tCO₂e)	For x: {1,2, 3 (material)} $\sum_{n=0}^{\infty} \left(\frac{\text{current value of investment}_{i}}{\text{investee company's enterprise value}_{i}} \times \text{investee company's Scope}(x) \text{GHG emissions}_{i}(tCO2eq) \right)$
		where n is the number of investee companies in the investments
	2. Carbon footprint (Scope 1,2 & material Scope 3 emissions tCO ₂ e per	$\frac{\sum_{n}^{i} \left(\frac{current\ value\ of\ investment_{i}}{investee\ company's\ enterprise\ value_{i}} \times investee\ company's\ Scope\ 1, 2\ and\ 3\ (material) GHG\ emissions_{i}(tCO2eq)\right)}{company's\ enterprise\ value_{i}}$
	€M invested)	current value of all investments (€M)
		where n is the number of investee companies in the investments
	3. GHG intensity of investee companies (Scope 1,2 & material Scope 3 emissions tCO₂e per €M revenue)	$\sum_{n}^{l} \left(\frac{current \ value \ of \ investment_{i}}{current \ value \ of \ all \ investments} \times \frac{investee \ company's \ Scope \ 1, 2 \ and \ 3 \ (material) \ GHG \ emissions_{i}(tCO2eq)}{investee \ company's \ \in M \ revenue_{i}} \right)$
		where n is the number of investee companies in the investments
	4. Exposure to companies active in the fossil fuel sector (% of AUM)	'Companies active in the fossil fuel sector' means companies that derive any revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels.
	5. Share of non-renewable energy consumption and production (%)	'Renewable energy sources' means renewable non-fossil sources, namely wind, solar (solar thermal and solar photovoltaic) and geothermal energy, ambient energy, tide, wave and other ocean energy, hydropower, biomass, landfill gas, sewage treatment plant gas, and biogas. 'Non-renewable energy sources' means energy sources other than those referred to above.
	6. Energy consumption intensity per high impact climate sector (GWh per €M revenue)	'Energy consumption intensity' means the ratio of energy consumption per unit of activity, output or any other metric of the investee company to the total energy consumption of that investee company. 'High impact climate sector' refers to NACE sectors A, B, C, D, E, F, G, H and L.
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas (% of AUM)	'Biodiversity-sensitive areas' means Natura 2000 network of protected areas, UNESCO World Heritage sites and Key Biodiversity Areas ('KBAs'), as well as other protected areas, as referred to in Appendix D of Annex II to Commission Delegated Regulation (EU) 2021/213912.
Water	8. Emissions to water (tonnes per €M invested)	'Emissions to water' means direct emissions of priority substances as defined in Article 2(30) of Directive 2000/60/EC of the European Parliament and of the Council and direct emissions of nitrates, phosphates and pesticides.
Waste	9. Hazardous waste and radioactive waste ratio (tonnes per €M invested)	'Hazardous waste' means hazardous waste as defined in Article 3(2) of Directive 2008/98/EC of the European Parliament and of the Council. 'Radioactive waste' means radioactive waste as defined in Article 3(7) of Council Directive 2011/70/Euratom.

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters

Social and employee matters	12. Unadjusted gender pay gap (ratio)	'Unadjusted gender pay gap' means the difference between average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.
cripioyee matters	13. Board gender diversity	'Board' means the administrative, management or supervisory body of a company.
	14. Exposure to controversial weapons	'Controversial weapons' means anti-personnel mines, cluster munitions, chemical weapons and biological weapons.

Indicators applicable to investments in sovereigns and supranationals

	15. GHG intensity (tonnes per €M GDP 2017 PPP)	$\sum_{n}^{i} \left(\frac{\text{current value of investment}_{i}}{\text{current value of all investments } (\in M)} \times \frac{\text{The country's Scope 1, 2 and 3 GHG emissions}_{i} (tCO2eq)}{\text{Gross Domestic Product } (2017 PPP basis)}_{i} (\in M)} \right)$ where n is the number of different sovereigns in the investments
Social	16. Investee countries subject to social violations	Social violations are determined using the 'Rule of Law' metric. This captures perceptions of the extent to which agents have confidence in and abide by the rules of society, in particular the quality of contract enforcement, property rights, the police, and the courts, as well as the likelihood of crime and violence. The indicator refers to the number of unique investee countries whose metric is less than -0.4, the threshold corresponding with MSCl's categorisation of High Risk.

Legal Notices

Baillie Gifford uses a combination of internal research and analysis and third-party data sources when preparing ESG-related disclosures.

Prior to using data sourced from a third-party provider, Baillie Gifford conducts appropriate due diligence on the third-party provider including validation of their methodology and assessment of their coverage and then carries out spot checks of the data periodically, escalating issues to the third-party provider where necessary.

However, Baillie Gifford cannot guarantee that such data is complete, up-to-date and/or accurate. Furthermore, information disclosed is based on data established at a specific time which may be liable to change. More generally, the coverage, standardisation, and comparability of ESG data continues to change and develop over time.

This disclosure is not intended to be used for marketing purposes and nor does it constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such.

The figures in this report are aggregations and calculations which draw upon data from our external data providers, principally MSCI.

MSCI ESG Research

Certain information contained herein (the "Information") is sourced from/copyright of MSCI Inc., MSCI ESG Research LLC, or their affiliates ("MSCI"), or information providers (together the "MSCI Parties") and may have been used to calculate scores, signals, or other indicators.
