

## Fund objective

To produce monthly income. Opportunities for capital growth are also sought, subject to prevailing market conditions.

The manager believes that appropriate comparisons for this Fund are the Investment Association Sterling Strategic Bond sector average, given the investment policy of the Fund and the approach taken by the manager when investing and a composite index comprising 70%: ICE BofA Sterling Non-Gilt Index and 30%: ICE BofA European Currency High Yield Constrained Index (hedged to GBP) being representative of the strategic asset allocation of the Fund.

## Investment proposition

Performance is driven by bond selection and active management of portfolio credit risk. Ideas are sourced across both investment grade and high yield and are driven by our fundamental, bottom-up stock analysis. The portfolio is well diversified with exposure typically between 60-85 companies. The portfolio could be characterised as combining the "best ideas" we can find across the high yield and investment grade markets with top-down management of portfolio risk.

**Key terms**

**Periodic performance** is a method of evaluating how a fund is doing over time. It compares a fund's performance in each period to its performance in past periods. It also looks at the performance of the fund to the performance of an index or its peers.

Discrete Performance is a method of evaluating the degree to which a fund performs compared against its benchmark on a given date.

**Hedging** is a strategy used to reduce or limit investment exposure to a particular risk. It involves taking an offsetting position in another asset to balance the risk associated with the original investment.

**Distribution yield** reflects the annualised income of the Fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the Fund (excluding tax) as at the date shown. It is based on a snapshot of the portfolio on that day.

**Underlying yield** reflects the annualised income net of expenses of the Fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the Fund (excluding tax) as at the date shown. It is based on a snapshot of the portfolio on that day.

**Duration** is a measure of how sensitive the price of a bond (or other debt instrument) is to a change in interest rates. In general, the higher the duration, the more a bond's price will drop in response to a rise in interest rates.

**IA sectors** are provided by the Investment Association. These sectors break up the universe of available funds to help investors navigate the large number of available products.

**Tracking error** measures the difference in the performance of the fund and the performance of the index it is benchmarked against.

**Redemption yield** estimates the annual total return of the portfolio gross of fees. It assumes all bonds are held until maturity (the date when the bond issuer is due to pay back the agreed value of the bond). The yield takes into account expected interest payments and the difference between the current market price and maturity value of the bonds held in the fund.

**Running yield** estimates expected cash income from the coupons of the current bond holdings in the portfolio. It is calculated by dividing the expected coupon payments from the portfolio's bonds by the current market price of those bonds. This yield provides investors with an understanding of the income generated by the fund relative to its current price, it does not account for potential capital gains or losses.

**Credit ratings** measure the creditworthiness of a bond issuer, such as a company or government. It tells you how likely the issuer is to pay back the money borrowed when they issued the bond. A higher rating means the issuer is considered more reliable and less likely to default on their debt, while a lower rating indicates a higher risk of not getting the invested money back. Baillie Gifford uses a blend of credit ratings from Moody's and S&P. Where there is no official rating for a bond issuer, Baillie Gifford will rate these internally. The ratings scale from highest to lowest (AAA, AA, A, BBB, BB, B, CCC, CC and C).

### Additional fund information

The Distribution yield is higher than the Underlying Yield because the Fund's expenses are charged to capital. This has the effect of increasing distributions and constraining the Fund's capital performance.

The ongoing charges figure is based on the expenses for the financial year and may vary from year to year. It excludes the cost of buying and selling assets for the Fund although custodian transaction costs are included. The Ongoing Charge Figure (OCF) is at the latest annual or interim period. The OCF may be lower than previous declarations as a result of a revision to how the indirect fees associated with closed-ended investment companies need to be shown. This does not necessarily mean that fund expenses have gone down rather that we have reverted to how they have been calculated until 30 June 2022 to reflect the revised Investment Association's Guidance on Disclosure of Fund Charges and Costs (July 2020, updated January 2022, revised November 2023). Further explanation of all the charges and costs relating to this Fund can be found in the Enhanced Disclosure of Fund Charges and Costs document which is available through our website, [bailliegifford.com](http://bailliegifford.com). Where the share class has been launched during the financial period and / or expenses during the period are not representative, an estimate of expenses may have been used instead. Baillie Gifford operates a single swinging price for the Fund and, therefore, may apply a dilution adjustment to the price to protect long-term investors from the costs associated with buying and selling underlying investments that result from other investors joining or leaving the Fund. This adjustment will affect relative performance, either positively or negatively. All figures are rounded, so any totals may not sum.

### Target market

This Fund is suitable for all investors seeking a Fund that aims to deliver income and seeks opportunities for capital growth over a medium- or long-term investment horizon. The investor should be prepared to bear losses. This Fund is compatible for mass market distribution. This Fund may not be suitable for investors seeking capital protection and investing for less than three years.

### Risk warnings

Investment markets can go down as well as up and market conditions can change rapidly. The value of an investment in the Fund, and any income from it, can fall as well as rise and investors may not get back the amount invested.

The specific risks associated with the Fund include:

- Market values for illiquid securities which are difficult to trade may not be readily available and there can be no assurance that any value assigned to such securities will accurately reflect the price the Fund might receive upon their sale. In certain circumstances it can be difficult to buy or sell the Fund's holdings and even small purchases or sales can cause their prices to move significantly, affecting the value of the Fund and the price of shares in the Fund.
- Custody of assets involves a risk of loss if a custodian becomes insolvent or breaches duties of care.
- Bonds issued by companies and governments may be adversely affected by changes in interest rates, expectations of inflation and a decline in the creditworthiness of the bond issuer. The issuers of bonds in which the Fund invests may not be able to pay the bond income as promised or could fail to repay the capital amount.
- The Fund's concentrated portfolio relative to similar funds may result in large movements in the share price in the short term.
- Derivatives may be used to obtain, increase or reduce exposure to assets and may result in the Fund being leveraged. This may result in greater movements (down or up) in the price of shares in the Fund. It is not our intention that the use of derivatives will significantly alter the overall risk profile of the Fund.
- The Fund's share price can be volatile due to movements in the prices of the underlying holdings and the basis on which the Fund is priced.
- The manager can charge some, or all, expenses to the Fund's capital, reducing its value. This amount can vary from year to year.

Further details of the risks associated with investing in the Fund can be found in the Key Investor Information Document or the Prospectus, copies of which are available at [bailliegifford.com](http://bailliegifford.com).
