

BAILLIE GIFFORD FUNDS COSTS AND CHARGES SUMMARY

As at 31 December 2020

Baillie Gifford Funds Costs and Charges Summary

As a firm, we understand the need for greater transparency of costs and charges as one of the means to allow investors to undertake a value assessment, which consequently will drive competitive pressure leading to increased efficiency and improved competitiveness of the market. We recognise that with various disclosure obligations on cost transparency (both under UK and European regulations), it is important for investors to have a full visibility of costs and charges within the product that they have chosen to invest in. This disclosure has been prepared in line with the Investment Association's (IA) Member Guidance on Disclosure of Fund Charges and Costs. Investors should take caution in comparing costs and charges information between product providers as some elements of costs and charges (e.g. implicit costs) can be calculated differently.

Funds Costs and Charges Summary – Explanatory Notes

This report is applicable to our range of UK Open Ended Investment Companies (UK OEICs), Irish Undertakings for Collective Investment in Transferable Securities (Irish UCITS) and Investment Trusts.

(A) Entry charge

When you enter certain share classes of a fund an entry charge may be imposed. This is the maximum amount that might be taken out of your money before it is invested.

These charges are not applicable for our range of UK OEICs funds or Investment Trusts but a preliminary charge of up to 5 per cent of the Net Asset Value per Share may be payable on any investment into class A shares of our Irish UCITS unless such charge is waived or reduced by the Investment Manager at its discretion.

If you buy or sell our Investment Trusts on the secondary market a Stamp Duty Reserve Tax (SDRT) of 0.5% is payable.

Exit charge

This is the maximum that might be deducted from the proceeds of selling your investment before being paid to you. Exit Costs are not charged across our range of UK OEICs, Irish UCITS or Investment Trusts.

Charges taken from the fund over a year:

Ongoing charges cover the day to day costs of running a fund. These comprise of, but are not limited to, management fees, other ongoing costs, gearing costs (Investment Trusts only), indirect costs and other indirect costs.

(B) Management fees

These are the standard annual investment management fees for our range of UK OEICs, Irish UCITS and Investment Trusts. The fee reported here reflects the current charge (ex-ante), not the historical average (ex-post).

Performance fees

Performance fees are not charged across our range of UK OEICs, Irish UCITS or Investment Trusts.

(C) Other ongoing costs

These include, but are not limited to, depositary fees, custody safe keeping fees and professional fees (e.g. audit fees).

(D) Indirect costs included in the OCF

If the fund you hold invests in other open-ended investment funds a proportion of the expenses that these underlying funds incur is included in the ongoing costs of your fund.

(E) Ongoing charges figure (OCF)

The ongoing charges are referred to as the Ongoing Charges Figure (OCF) under the Investment Association (IA) and Committee of European Securities Regulators (CESR) guidelines. These guidelines apply to the OCF calculated and disclosed in the KIID for our UK OEICs and Irish UCITS Funds. The OCF disclosed for the Investment Trusts follows the Association of Investment Companies (AIC) guidelines but includes the additional gearing costs required for the Key Information Document (KID) required under the PRIIPs regulation. The OCF is calculated as the ratio of the total ongoing charges to the average net asset value of the fund, expressed as a percentage.

(F) Costs excluded from Department of Work and Pensions (DWP) Charge cap

Custody transaction fees are charged by the custodian for transacting in a market. These flat fees vary by market being transacted and are excluded from the Department of Work and Pensions (DWP) charge cap. Please note these are different from the custody safe keeping fees, which are charged on a monthly basis and are included within the charge cap expenses.

(G) Defined Contributions (DC) Charge cap administration expenses

These are equal to the fund OCF less any charges that are excluded (described above) from the OCF per the current DWP DC charge cap guidance.

(H) Gearing costs (Investment Trusts only)

The Investment Trusts managed by Baillie Gifford can borrow money to make further investments (sometimes known as 'gearing' or 'leverage'). The gearing cost is the associated cost of borrowing money to invest, including interest and arrangement fees.

(I) Other indirect costs

If the fund holds other listed Collective Investment Undertakings (CIU's) or 'closed ended investment funds', the underlying expenses of these funds, like the underlying expenses of listed companies, have not been included in the fund's OCF calculation.

We are fully committed to cost transparency, so we are disclosing these costs. Under Europe's Markets in Financial Instruments Directive (MiFID II) and Packaged Retail and Insurance Products regulation (PRIIPs) management fees and underlying expenses of investment products should all be disclosed as part of the ongoing costs of a product.

Some of the companies which we identify as investment companies – rather than investment products – also produce cost disclosures. We view these expenses in the same category as expenses incurred by any listed

company rather than investment management costs and, consistent with the expenses incurred by other listed companies, we have excluded these from the OCF calculation. However, where these investment companies disclose costs, we have included these in 'Other indirect costs' in the interest of transparency.

The continued exclusion of the underlying expenses of closed ended investment funds from the OCF calculation has been revised in new guidance issued by the IA. In addition, the latest proposed DWP guidance on expenses that are to be included in the DC pension charge cap has also been extended, so these costs will be included in both the OCF and the DWP charge cap from October 5th, 2021.

(J) PRIIPs/MiFID II ongoing costs

We are required to include the 'Other indirect costs' described above in the ongoing costs reported in the European PRIIPs template (EPT) and the European MiFID II Template (EMT). This is why the ongoing costs reported in these templates differ from those reported in the UCITS Key Investor Information Document (KIID). As Investment Trusts are required to produce a PRIIPs Key Information Document (KID) the other indirect costs as well as gearing costs are included in the ongoing charges reported in their KID.

Explicit transaction costs – (K) Broker commissions and (L) Transfer taxes

These arise when buying or selling stocks in the financial markets. Buying or selling stocks may result from: individual stock considerations, portfolio changes due to broader implementation of Baillie Gifford's investment policy and from both investment inflows and outflows into/from the fund.

(M) Implicit transaction costs

We measure implicit transaction costs using the full PRIIPs arrival price (or slippage) methodology which combines spread and market impact. Market impact is an estimate of the impact on the market price of a trade being placed. The estimate also includes market movements unrelated to the trade and assumes these are random and will tend to average out to zero over many trades. Where these movements do not average out to zero, they will cause implicit transaction costs to be over- or under-estimated. The implicit (or arrival) cost of a transaction is measured as the difference between the average execution price and the arrival price, expressed as a percentage.

The transaction costs are calculated on an annualised basis, based on the average transaction cost incurred by the fund over the previous three years. Where a fund has been operating for less than three years and does not have a full three years of transaction costs history an estimate is used as per the PRIIPs methodology.

Negative transaction costs can occur when applying this methodology and such an outcome indicates that trading has resulted in a net gain rather than a net cost to the fund. There are two main scenarios where this can occur:

- The amount of anti-dilution offset (described below) collected by the fund exceeds the sum of the implicit costs calculated for the fund and explicit costs incurred by the fund.
- Market movements in a traded instrument's price between when the order was placed (the arrival time) and when the order was fulfilled (execution time). If the execution price of an instrument that is being purchased falls below the arrival price a negative implicit cost (or notional gain) occurs. If the execution price of an instrument that is being sold is greater than the arrival price a negative implicit cost (or notional gain) also occurs. If these scenarios occur with enough frequency, or where there are isolated instances that have a disproportionate impact on the total transaction costs, then a negative transaction cost total can occur.

(N) Indirect transaction costs

Where a fund invests in other investment funds, the average transaction costs of those other funds are included as indirect transaction costs in the fund's total transaction cost.

(O) Anti-dilution offset

We use a swinging single pricing methodology for our pooled funds (UK OEICs and Irish UCITS) and reserve the right to adjust a fund's price to protect your investment from the costs of buying and selling investments that result from other investors joining or leaving a fund. An estimate of the transaction costs that may be incurred by a fund in response to other investors' dealing activity is passed onto the incoming/outgoing investor through the swinging single pricing mechanism by means of an anti-dilution adjustment. The amount of any such adjustment is calculated by reference to the estimated costs of dealing in the underlying investments, including any dealing spreads, broker commissions, transfer taxes and stamp duty.

Under the European PRIIP's regulations it is permissible to offset the transaction costs of a fund with the proceeds collected from the application of the anti-dilution adjustment described above.

(P) Total transaction costs

This is the sum of broker commission, transfer taxes, implicit costs, indirect costs, and the anti-dilution offset. This is equivalent to the portfolio transaction costs reported in the PRIIPs EPT.

(Q) Total costs

This is the sum of (J) PRIIPs/MiFID II ongoing costs and (P) Total transaction costs. This represents what could be referred to as the 'total fund cost' however it is generally the case that the ongoing costs are viewed separately from transaction costs and both are reported separately in the PRIIPs EPT and the MiFID II EMT.

Transaction costs can fluctuate significantly as they are directly linked to trading activity as a result of investment decisions, client inflows/outflows and market conditions, whereas ongoing costs are not, and tend to be of a more constant nature within the direct control of the asset manager.

Funds Costs and Charges Summary

As at 31 December 2020			Costs paid by the investor										Costs paid by the Fund						(Q)
